PROFESSIONAL SUMMARY

Product lead who builds AI into products and can build the AI herself. Owned a new web platform (consumer app plus partner portal) from requirements to a launch-ready build: wrote the full specification (56 user stories, about 410 acceptance criteria), defined the MVP, managed two engineering vendors, and designed AI features including a demand-driven pricing model, natural-language search, and image moderation. Backed by an MS in Data Analytics, two published ML papers, and AWS Solutions Architect and SnowPro Core certifications.

EDUCATION

University of Illinois at Springfield

Master of Science, *Data Analytics*

Aug 2023 - May 2025

GPA: 3.7/4.0

PES University

Bachelor of Technology, *Computer Science Engineering*

Aug 2019 - May 2023

GPA: 3.65/4.0

SKILLS

Product: product strategy, MVP definition, user stories and acceptance criteria, roadmapping, stakeholder and vendor management, UAT and QA, Jira, Trello

AI and ML: LLM APIs (OpenAI), Cursor, Claude Code, Amazon Rekognition, Python (Pandas, NumPy, scikit-learn), XGBoost, TensorFlow/Keras, Hugging Face

Data: SQL, Power BI, Tableau, Hadoop

Platforms and integrations: Stripe Connect, REST and XML APIs, n8n, webhooks, JavaScript, React, Docker, Git

WORK EXPERIENCE

Remwes, LLC | Product Lead and AI Engineer | Springfield, IL

Jul 2025 - Present

- Lead product and AI for a new consumer web platform and its partner portal, built from the ground up, reporting to the founder and the product director.
- Designed a demand-driven dynamic pricing model that sets discounts from real-time demand scores and live event data across six time windows; chose explainable, rule-based logic over a black-box model to keep pricing predictable for partners, and delivered it as a Python module with an engineering spec.
- Brought in demand, event, and review data providers (Aggregate Intelligence, PredictHQ, TrustYou) to feed AI features, and evaluated AI agent platforms for the roadmap.
- Built an AI search API that turns natural-language requests into structured search parameters, and image moderation with Amazon Rekognition for a social networking product.
- Sourced partners through outreach to 50 companies (24% response rate), signed three API partners, and scoped their integrations and Stripe Connect payments.
- Wrote the requirements baseline and all 50+ user stories (acceptance criteria, each with a Definition of Ready and Done), which became the working spec for two outsourced engineering teams.
- Defined the MVP and launch sequence: proposed a consumer-first Phase 1 on partner API inventory with the partner portal built in parallel; adopted by leadership.
- Managed two engineering vendors through sprint reviews and UAT; diagnosed the first vendor's delivery gaps and ran the handover to a new partner as product owner.
- Designed a PCI-safe payment flow with single-use virtual cards, and turned a state tax regulation change into a payment-model recommendation backed by a compliance cost analysis.
- Built an automated workflow for AI-generated marketing videos and social posts (Seedance, Nano Banana); proposed an illustrated mascot series over AI-generated testimonials for a pre-launch app to protect brand credibility.

DotKonnekt | Machine Learning Intern | Bengaluru, India

Jul 2024 - Aug 2024

- Researched 20+ current large language models and AI-text detection methods, then built a Python text-transformation pipeline with HTML-aware processing that preserved headings and keywords.
- Ran a competitive analysis against commercial tools on speed, cost, and word limits, and presented findings to stakeholders to inform the product roadmap.

Patil Construction Company | Data Analyst Intern | Bengaluru, India

Feb 2023 - May 2023

- Built an ML cost estimation tool that replaced manual spreadsheet calculations, from data collection with executives through deployment behind a web form and n8n workflow.
- Compared linear regression with a neural network and chose the neural network (test R^2 0.964 vs. 0.827, about 55% lower error), weighing accuracy against training time and explainability.
- Defined KPIs and built a Power BI HR attendance dashboard covering about 40 employees.

CERTIFICATIONS & ACHIEVEMENTS

- AWS Certified Solutions Architect – Associate - AWS

Feb 2025

- SnowPro Core Certification - Snowflake

Feb 2025

PUBLICATIONS

Indoor Violence Detection Using a Lightweight Transformer Model, *IEEE INCET 2023*

- Goal:** detect violence in home video to support child-safety alerts, a hard problem because indoor footage is scarce and furniture often blocks the view.
- What we built:** a lightweight video vision transformer (ViViT) in TensorFlow, trained on a balanced dataset of 1,112 videos that I procured and curated.
- Results:** 88.24% accuracy overall and 98% on partly hidden (occluded) video, beating a published transformer baseline by 11.97%; preprocessing cut computation about 3x.

Anatomizing Terrorism, *IJRASET, 2022*

- Goal:** find patterns in 50 years of public Global Terrorism Database records (201,183 incidents) to inform prevention research.
- What we built :** cleaned the data from 135 to 41 features, then compared four models: k-NN, Random Forest, Bagging, and a neural network.
- Results:** the neural network classified attack type with 94.63% accuracy, and Random Forest predicted damage extent with 0.94 accuracy.
